

Field Service Engineer

The company:

We are IMS: an experienced partner in developing and building automated production lines for world's leaders in small sensors, actuators and micro-optics. For the expansion of our current service team, we are looking for an experienced Field Service Engineer.

As Field Service Engineer at IMS you are responsible delivering support services (including commissioning, preventive maintenance and promptly intervene on maintenance needs) at our international clients worldwide. All our mechanical solutions are customer specific, providing challenging issues in your field of expertise. From your mechatronic background and experience you are able to solve the issues occurring at the client either individually or together with your colleagues. In many cases you are the first point of contact for the client, and that is why you are focused in carefully building a good relationship. You advise the client and uncover new opportunities. You will also train the users.

We ask:

That you have an applied science degree (HBO) (for example Mechatronics, Mechanical Engineering, Electrical Engineering etc.). You are welcome to apply if you have a vocational education (MBO) and have gained an applied science knowledge level through experience. You have extensive experience in a similar function, preferably in a mechatronic working environment. Thereby you have knowledge of Solid Works, PLC, PC controls, robotics and vision and are capable of reading mechanical/electrical drawings.

Having a great deal of freedom and independence you know how to communicate the interests of IMS at the client. You are practical, analytical, result oriented and have the ability to improvise. It is not a problem for you to travel regularly to stay with our clients worldwide. Furthermore you have an A-level in the English and German language.

What do we offer?

- A diverse job in an innovative, international work environment.
- Client specific projects with new technical challenges every time
- Space for personal and subject oriented development.
- An involved, venturous group of colleagues who are in it together.

Interested?
