

Controls engineer

Do you have broad experience in the field of Controls, and are you looking for a new high-tech environment where you work with state of the art techniques? And do you constantly want to work on solving customer problems around the world? This job offers you all the space to do so.

As a Controls Engineer within our organisation you are involved during the entire project from concept to implementation at the customer. We design, assemble and test machines mainly in-house. Short communication lines help us to keep track of the projects closely.

As Controls Engineer at IMS you will be working in a multidisciplinary project team to translate mostly complex client demand into a technical solution. You will design operating systems for high precision/high volume production lines. You will have the possibility to work with various systems like PLC, PC, HDMI, Vision, Motion Control and robot. You are responsible for the software and hardware design, from concept to turn-key installations. You will implement or guide the software design and organise the realisation of the hardware design, where you also manage the outsourced activities. You have regular technical deliberation with the project manager, your colleagues and the client when needed.

Depending on your experience you take accountability for more complex projects within IMS. In addition you will escort and coach your junior colleagues and are actively involved in improvement processes, aimed towards your own departments as well as organisation wide.

We ask for:

You have at least a relevant HBO/WO education (for example Electrical Engineering, Industrial Automation, Systems & Control, Mechatronics). Additionally you have gained extensive experience in a similar function and have an extensive knowledge of automated production processes. From a large degree of freedom you proactively help the controls team and the organization with improvements and developments. You are able to think abstractly and collaborate with other disciplines and you have an innovative and result-oriented attitude. You can read and write fluent English. Mastering basic Dutch language or another foreign language is a plus.

We offer:

- A diverse job in an innovative, dynamic work environment, where you have the possibility to be involved in the project from a to z.
- Always a challenge to find the technical solution another will not find.
- Space for personal and subject oriented development.
- collaborate with a group of committed, enterprising and specialist colleagues.
- The opportunity to travel for work (not mandatory)
